To the best of our knowledge, studies using 3D power Doppler ultrasound (3D-PDU) and VOCAL in the assessment of hepatic hemodynamics and venous blood flow in particular have not yet been published. In this study, both the use of 3D-PDU and of VOCAL software were validated in the sonographic

Dr. Sperling will then fuse these ultrasound images onto the non-contrast MRI study. As imaging improves, so does prostate cancer detection. Beginning with the use of gray-scale ultrasound (black-and-white images) in the late 1980s, doctors had the ability to guide biopsy needles into the ...
