Amplitude Modulation Tutorial Solutions

Eventually, you will entirely discover a extra experience and endowment by spending more cash. yet when? accomplish you consent that you require to get those every needs like having significantly cash? Why don't you attempt to acquire something basic in the beginning? That's something that will lead you to comprehend even more re the globe, experience, some places, next history, amusement, and a lot more?

It is your totally own get older to appear in reviewing habit. in the course of guides you could enjoy now is **amplitude modulation tutorial solutions** below.

Here, $f_{max} = f_c + f_m$ and $f_{min} = f_c - f_m$. Substitute, f_{max} and f_{min} values in bandwidth formula. $BW = f_c + f_m - (f_c - f_m) \Rightarrow BW = 2 f_m$. Thus, it can be said that the bandwidth required for amplitude modulated wave is twice the frequency of the modulating signal.

In the continuous-wave modulation, a high frequency sine wave is used as a carrier wave. This is further divided into amplitude and angle modulation. If the amplitude of the high frequency carrier wave is varied in accordance with the instantaneous

Amplitude of the carrier signal, $A_c=20V$ Frequency of the carrier signal, $f_c=4 \times 10^6 \text{ Hz}=4 \text{ MHz}$ Frequency of the message signal, $f_m=1 \times 10^3 \text{ Hz} = 1\text{KHz}$ Modulation index, $\beta=9$ Here, the value of modulation index is greater than one. Hence, it is Wide Band FM. We know the formula for modulation index as $\beta=\frac{\Delta f}{f_m}$

Short Questions and Answers on Angle Modulation (FM and PM)
Q.1. What do you mean by angle modulation? Ans. Angle modulation may be defined as the process in which the total phase angle of a carrier wave is varied in accordance with the instantaneous value of the modulating or message signal while keeping the amplitude of the carrier constant.

Quadrature amplitude modulation (QAM) requires changing the phase and amplitude of a carrier sine wave. One of the easiest ways to implement QAM with hardware is to generate and mix two sine waves that are 90 degrees out of phase with one another.
