Moreover, impact factor is having all the information which is published in the last two years in the given journal received.

**(New) All Journals Impact Factor - 2020 - Open access Journals**  
The impact factor or journal impact factor of an academic journal is a scientometric index that reflects the yearly average number of citations that articles published in the last two years in a given journal received. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

**Impact factor - Wikipedia**  
The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

**Journal Rankings on Medicine**  
The 5 year journal impact factor is the average number of times, the articles published in a journal get cited in last 5 years. It is calculated by dividing the number of citations received with the total number of articles published in previous five years.

**Open Access Journals Impact Factor | Scientific Journals ...**  
This list provides a simple impact factor, computing a ratio of the number of citations by the number of items in the series. Citation counts are adjusted to exclude citations from the same series. These computations are experimental and based on the citation analysis provided by the CiteC project, which uses data from items listed in RePEc. Only series or journals with 50 or more items are ranked.

**Simple Impact Factors for Economics Journals | IDEAS/RePEc**  
The impact factor is a parameter for highlighting the relative significance of a journal within its specific field. It indicates the frequency with which an article appears in the JCR. The impact factor acts as a measuring medium for the number of citations received by articles in a particular journal.

**What is Impact Factor? - Journals Club**  
The journal impact factor should be used with informed peer review. In the case of academic evaluation for tenure, it is sometimes inappropriate to use the impact of the source journal to estimate the expected frequency of a recently published article. Again, the Journal Impact Factor should be used with informed peer review.

**Journal Impact Factor - Journal Citation Reports - Web of ...**  
The annual JCR impact factor is a ratio between citations and recent citable items published. Thus, the impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years (see Figure 1).
