Using a minimum viable product is a powerful concept to validate the product backlog that be used in harmony with Scrum's approach of creating working software, exposing it to customers and users, investigating their feedback, and making the necessary adaptations. Many thanks to Stefan Roock for feedback on the first MVP of this post.

The Vision, the Product Backlog and the Minimum Viable Product

A minimum viable product has just enough core features to effectively deploy the product, and no more. Developers typically deploy the product to a subset of possible customers—such as early adopters thought to be more forgiving, more likely to give feedback, and able to grasp a product vision from an early prototype or marketing information. This strategy targets avoiding building products that customers do not want and seeks to maximize information about the customer with the least money ...

Minimum viable product - Wikipedia

The minimum viable product (MVP), as originally defined by Eric Ries, is a learning vehicle. It allows you to test an idea by exposing an early version of your product to the target users and customers, to collect the relevant data, and to learn from it.
