It turns out that hydrogen bonds are important for a few more . . . to answer the review questions at the end of this section. 3rd Idea: Enzymes are mostly macromolecule . . .

### Biology Keystone Review Packet Answer Key Part 3

How do keystone species such as the sea otter affect the biodiversity of their habitats? Sea otters prey upon urchins. Urchins feed on kelp. If otter population drops, sea urchin population would increase and kelp would decrease. As a result of the loss of kelp in the kelp-forest habitat, the biodiversity of that habitat would be expected to decrease.
