A shape is said to have Line Symmetry (often called Reflection Symmetry or Mirror Symmetry) when it can be folded in half so that both halves match. If a mirror is placed along the line of the fold (called the 'line of symmetry' or 'mirror line') then the shape will look the same as without the mirror.

According to Felix Klein, geometry is the study of those properties in space that are invariant under a given transformation group. Intuitively, symmetry is the correspondence of shape at every point of a space. An interesting problem in geometry and many physical sciences is to determine the symmetries of a space from its shape.
